

Dermacase

Tom Enta, MD, FRCPC Stewart P. Adams, MD, FRCPC

.....

CAN YOU IDENTIFY THIS CONDITION?

A 43-year-old woman developed intensely itchy papules and vesicles on her elbows, knees, and buttocks. The lesions, which appeared to cluster in groups, were superficially ulcerated and slow to heal.

The most likely diagnosis is:

1. Scabies
2. Dermatitis herpetiformis
3. Adult atopic dermatitis
4. Neurotic excoriations

Answer on page 2211

.....
Dr Enta is a Clinical Professor of Medicine (Dermatology) at the University of Calgary. **Dr Adams** is a Clinical Lecturer in Dermatology at the University of Calgary.
