

Can you identify this condition?

Alysia Zhou Nataly Weizblit Jason Noble MD

A 73-year-old man presents to your office complaining of a gradual decrease in vision in both eyes over the past 1 to 2 years. His vision is particularly worse at nighttime. Distance visual acuity is 20/50 OD and 20/40 OS. Slit-lamp examination after dilation is shown in the above image.

The appropriate management is

- 1. Nonurgent referral to an ophthalmologist for surgery**
- 2. Smoking cessation**
- 3. Use of sunglasses**
- 4. All of the above**
