

Eye tonometry

Procedures and assessments video series

Juan Antonio Garcia-Rodriguez MD CCFP DipSportsMed

Check out this month's instructional video—"Eye tonometry." Tonometry is a method of measuring intraocular pressure to screen for ocular hypertension and glaucoma. Undiagnosed glaucoma can lead to devastating effects; screening efforts are essential to its detection at the earliest possible stage, as most people with ocular hypertension do not experience any symptoms. The video reviews the equipment and technique required for this procedure.

The video "Eye tonometry" is available at www.cfp.ca. Go to this article online, then click on **CFPlus** in the menu at the top right-hand side of the page.

Past instructional videos can be accessed online at www.cfp.ca. On the home page, click on Collections in the top menu, then click on Video Series.

Dr Garcia-Rodriguez practises family medicine and sports medicine in Calgary, Alta, and is Assistant Professor in the Department of Family Medicine at the University of Calgary.

Can you identify this condition?

Kayi Li MD Benjamin Barankin MD FRCP

A 25-year-old African-Canadian man presented with persistent, scarlike, hairless lesions on the nape of his neck that had been present for the past 3 years. Initially, the lesions were pruritic, round bumps that developed into small scars. These scars have always been isolated to the nape of the neck. No lymphadenopathy was observed and he had no history of acne or trauma to the area.

The most likely diagnosis is

1. Impetigo
2. Acne vulgaris
3. Tinea capitis
4. Acne keloidalis nuchae
5. Hidradenitis suppurativa

Video 2. Eye tonometry
