

newly reported infections in northwestern Ontario,<sup>11</sup> which appeared in the November issue of *Canadian Family Physician*, an error was inadvertently included. The corrections appear below.

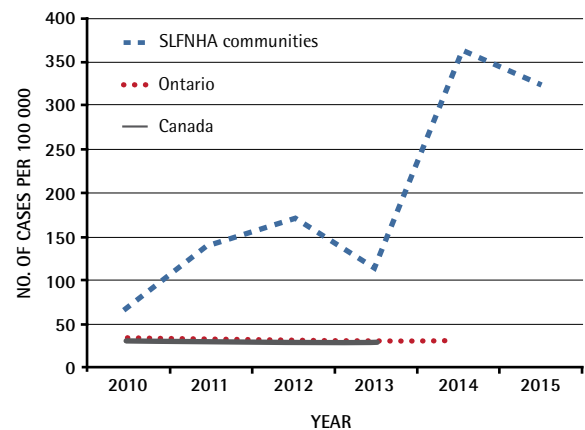

The 2011 rate per 100 000 (95% CI) of newly reported cases of hepatitis C virus infection should have been 135.5 (112.7 to 158.3) in **Table 1**. This change affects the initial slope of the rates presented in **Figure 1** but does not affect the overall increasing trend. The upper limit of the 95% CI for the 2014 rate should be 327.3. The correct versions of **Table 1** and **Figure 1** are presented here. The authors apologize for the error and any confusion it might have caused.
